Topic Expert Group: Follow-up and continuing care

Communication, speech, and language

Sansavini A, Bosch L, Wolke D, van Wassenaer-Leemhuis A

Target group
Infants born very preterm or those infants with risk factors (see preamble TEG Follow-up & continuing care), parents, and families

User group
Healthcare professionals, neonatal units, hospitals, health services, and follow-up services

Statement of Standard
Standardised assessment of communication, speech, and language development is conducted by two years of age and repeated at transition to school.

Rationale
The goal is to assess and evaluate communication, speech and language development and guide pathways for parents and educational management in case of impairment.

Clinically significant long-term adverse effects of preterm birth have been shown for speech and language. (1–4) Biomedical risk factors, such as brain injury, extremely low gestational age, intrauterine growth restriction, and bronchopulmonary dysplasia (5–7), as well as social risk factors, such as low maternal education, lack of parenting responsiveness, and ethnic minority status (4,6,8), increase risk. Association with delays in other domains is common (30%) and very frequent in case of neurological damage (9), motor or neurosensory impairments. (10)

Weaknesses in early basic cognitive, communication and motor skills affect later language abilities. (5,6,11,12) In particular, gestural, and vocal production are less advanced in very preterm infants and predictive of language skills at two years. (6,13–15) Joint attention is weaker in very preterm infants but modulated by maternal behaviour. (16,17) Early feeding problems may contribute to oral, sensory, motor, and speech dysfunctions. (18) Delays in lexicon, grammar, and phonological skills are detectable at two-three years (2,5,19–23) and become more evident during preschool and school age when also pragmatic difficulties appear. (1,2,24–26)

Delays in phonological awareness, a precursor of literacy and school achievement, have been identified in very preterm infants at six and eight years. (24,27) Language difficulties impact learning and academic achievement as well as social interactions (28) and are associated with high individual and societal costs.

Benefits

Short-term benefits
N/A
**Long-term benefits**

- Improved information on communication, speech, and language functioning that is required for diagnosis of communication, speech, and language impairment and for differential diagnosis (autism, etc.) (4,16)
- Provides feedback to parents and/or main caretakers (4,16)
- Improved planning of appropriate intervention or management (4,16)
- Improved decision making for schooling and learning support (4,16)
- Provides feedback to perinatal and neonatal services and healthcare officials (4,16)
- Provides an endpoint for obstetric and neonatal high-quality trials (4,16)
- Reduced undue performance pressure on the child (consensus)
- Reduced risk of secondary mental health problems (consensus)
- Improved parent-child interaction and adaptation to the child language skills (4,16)
- Improved reading and writing skills and academic outcomes (consensus)
- Increased social integration and quality of life (consensus)
- Reduced social burden and social costs (consensus)

**Components of the standard**

### Getting started

#### Initial steps

| For parents and family | |
| • Parents are informed by healthcare professionals about follow-up programme including speech and language assessments. | |
| • A service is initiated that uses parent reports using screening questionnaires. (35–42) | |
| **For healthcare professionals** | |
| • Attend training on standardised speech and language assessments. | |
| • Institute a standard schedule of assessment. | |
| • Establish communication with other healthcare institutions providing follow-up care. | |
| **For neonatal unit, hospital, and follow-up team** | |
| • Develop and implement a unit guideline on standardised speech and language assessments. | |
| • Develop information material on follow-up programme including speech and language assessments for parents. | |
| • Support healthcare professionals to participate in training on standardised speech and language assessments. | |
| • Provide space and resources for follow-up assessments in clinics or postal/online. | |
| **For health service** | |
| • Develop and implement a national guideline on standardised follow-up programme including speech and language. | |
