**Topic Expert Group:** Education and training of the multidisciplinary team working in neonatology

**A common neonatal medical training curriculum**

Roehr CC, Breindahl M, van den Hoogen A, Johnston L

**Target group**
All doctors working in neonatal care

**User group**
Parents, healthcare professionals, professional societies, education providers, health services, and regulators of the profession

**Statement of standard**
All doctors providing care to infants and their families receive training using a competency based curriculum and assessment framework.

**Rationale**
Neonatal outcomes have been shown to be associated with the level of training of medical and nursing staff, as well as adequate staffing, and it has clearly been shown that healthcare professional education and consistent evidence-based practice shortens patients' hospitalisation. (1,2)

In 1988, the European Society of Paediatric Research (ESPR) Working Group on Neonatology recognised the immediate need to specify minimum training requirements for the accreditation of neonatologists throughout Europe. (3) To ensure that infants and families receive standard and evidence-based quality of care, the European Database of 30 member countries from the Union of European Medical Specialties (UEMS) has shown a very high degree of consensus on key skills and competencies necessary to practice neonatology. (3) Consequently, the European Society for Neonatology (ESN), now called European Board of Neonatology (EBN), has developed a Curriculum and Assessment Framework (3), which was approved and endorsed by the European Board of Paediatrics (EBP). The curriculum supports the harmonisation of national programmes for subspecialist training in neonatology throughout Europe, aiming to establish unified training in neonatology by clearly defining standards. (4)

**Benefits**

- Improved communication skills between medical teams and families and other members of the multi-disciplinary NICU teams (5–7)
- Reduced mortality and morbidity (2)
- Decreased rates of cerebral palsy and retinopathy of prematurity (8)
- Harmonised standards of education and training for doctors practising neonatal intensive care through a common European curriculum (consensus)
- Consistency in quality of care delivery in neonatology (consensus)
**Components of the standard**

For hospitals
N/A

For professional societies
4. Standards of care, including competencies at the local level are developed and regularly updated, disseminated and promoted. (3) B (Moderate quality) Guideline

For education providers
5. A (post) graduate programme focused on neonatal medicine, including the following domains is provided: neonatal physiology and pathophysiology, family-centred care, clinical practice, leadership and teamwork, professional development and research. (3) B (Moderate quality) Training documentation

6. Core elements of training in neonatal medicine are included in educational curriculum of physicians taking care of infants. (3) B (Moderate quality) Training documentation

Health service and regulators of the profession
7. Common national training frameworks aligned with the relevant European Qualification Framework are available and regularly updated. B (High quality) Training documentation

Where to go – further development of care

<table>

### Getting started

**Initial steps**

**For parents and family**
- Parents are involved in the delivery of medical education programmes.

**For healthcare professionals**
- Attend broader specialty training through a university administered neonatal online training and education programme. (11)

**For neonatal unit**
- N/A

**For hospital**
- Support healthcare professionals to participate in broader specialty training.

**For education providers**
- Promote and offer access to professional development programmes.
  - Include neonatal care content in undergraduate curricula.

**For health service**
- Provide opportunities for neonatal placements during clinical training.
  - Develop and implement common training frameworks aligned with the relevant European Qualifications Framework. (10)
