

Table 16 Standard "Transition from hospital to home" public consultation comments

ID	Country	How would you rate the overall quality of the standard "Transition from hospital to home"?	Do you have any recommendations on how to improve the standard "Transition from hospital to home" (e.g. rational, benefits, components)?		Is there any important evidence or useful guidelines you would recommend to be included in the standard "Transition from hospital to home"?		Do you think the standard "Transition from hospital to home" is relevant in your country?		Do you have any conflict of interest (e.g. financial support or consulting of industry)?		Please specify if you are responding as an individual or on behalf of an organisation.
			Response	Response	Yes - Please make your recommendation(s) below.	Response	Yes - Please specify below, which evidence should be added (DOIs, references) to the standards and why.	Response	No - Please specify below why the standard is not relevant in your country.	Response	
1	Germany		4	I don't know		No		Yes		No	Bundesverband Bunter Kreis
2	Czech Republic		4	No		No		Yes		No	Individual
3	Poland		5	No		No		Yes		No	Individual
4	United States		4	Yes - Please make your recommendation(s) below.	More emphasis needs to be placed on the family and their perceptions following discharge. Emphasize more on infant and family mental health supports. This is especially important now given the added stress of COVID. Benefits to family are decreased stress, increased coping, and improved resilience.	Yes - Please specify below, which evidence should be added (DOIs, references) to the standards and why.
